Reduce costs and improve efficiencies of building exams—without losing exam integrity.

The solution to the expensive and time-consuming process of developing high-quality, legally defensible exams is here: Pearson VUE's ExamDeveloper™ is the tool designed to increase exam development efficiency and effectiveness.

Pearson VUE's own test development experts rely on ExamDeveloper™ to create high-stakes exams for clients. This web-based software is configurable so your organization can use all or individual components to maximize cost savings … while increasing productivity and exam integrity.

Save money, save time

The typical cost of conducting in-person development meetings for a high-stakes exam can exceed $10,000 per session. Since coordinating the schedules of a team of subject matter experts (SMEs) can result in delays and lags in productivity, why not utilize this software to help defray some of those costs? ExamDeveloper™ lets your team work wherever, whenever is convenient. This results in cost savings for you and keeps the development process moving forward.

Improve Quality

ExamDeveloper™ makes it financially feasible for you to build a robust team of SMEs to improve the quality of your exam by involving more subject matter experts in the development process and allow them to have a good experience while doing so. The software also includes built-in tutorials and psychometric advice to assist item writers in creating a high-quality exam.

Lower participant burden

Face-to-face meetings require SMEs to be away from their jobs and families. This burden can have an impact on the time and effort a participant is able to dedicate to your exam. The interactive platform of ExamDeveloper™ emulates the natural collaboration of a face-to-face meeting without the need for expensive, time-consuming travel. This makes SME participation in future development efforts more likely.

Safeguard your exam's security

Security is a vital component of ExamDeveloper™. The software is audited by third-party Internet security consultants and guards against known Internet security vulnerabilities. At an organizational level, you can manage user privileges to ensure individuals working with exam content have access only to the information they really need.

> " Technical support is always available and the very few problems we have experienced have been rectified quickly. We have transitioned our entire examination into ExamDeveloper™ quickly and with little difficulty, and look forward to using and benefitting from the system for many years. "
