

A trusted partner in validating skills and experience

We partnered with the Department of Defense more than a decade ago to build a network of on-base testing centers that deliver high-stakes, professional certification exams to the U.S. military community.

In the years that followed, our work with the federal government has expanded to include the Defense Counterintelligence and Security Agency, Department of State, United States Defense Intelligence, and other government agencies.

With the most experienced staff of PhD psychometricians, we provide a suite of exam development and certification program services. In addition, we support commercial-off-the-shelf (COTS) and customized program solutions.

We have undergone rigorous security scrutiny and validation to comply with the Federal Information Security Management Act (FISMA). We continue to comply with FISMA requirements and to receive the government's Authority to Operate in order to work with federal customers.

Learning Asset Management System: Training solutions and certification vouchers for the **U.S. Military Services**

Safety and security are vital in military initiatives. We certify cybersecurity and PMI expertise and verify the qualifications of Service members in these areas, helping ensure qualified personnel are in safety-critical positions

Full-service learning and certification testing—with streamlined procurement and asset management tools.

Developed specifically for those responsible for training U.S. Service members, federal government employees and contractors, we bring together instructor-led training, learning products, exam vouchers and robust digital inventory tracking and budget management tools in a single, comprehensive offering.

Unsurpassed multi-modal learning products. Because individuals learn in different ways, Pearson VUE works with the world's most respected publishers to bring you a diverse collection of learning materials:

- CertPREP courseware
- Instructor-led training resources
- Self study
- Online courseware
- Virtual labs
- eBooks
- Practice tests
- Flash cards and a host of other products

Flexible financial management allows you to purchase learning products and exam vouchers on your schedule and as requirements change, with the added ability to reallocate funds across product lines if necessary.

Inventory and budget information in real-time provides agile and effective forecasting and resource allocation. Assign, deliver, and track usage of all your digital learning assets including certification vouchers and practice exams. Based on expiration dates or candidate preparedness, the solution allows administrators to redistribute unused assets to other students.

Pre-conditioned, rule-based distribution lets you approve, assign and execute a learning pathway for Service members pursuing certification. When a student achieves a preassigned minimum score on a practice test and shows readiness to sit for an exam, the system can automatically send a voucher with instructions on how to schedule the exam.

We offer **certification exam vouchers** from leading cybersecurity and productivity programs. These industry-leading certifications validate the skills and knowledge required to perform at the highest levels.

CertPREP courseware integration allows real-time tracking of student progress and flexible access to course materials.
